## NR7000－OG picoPOD

## 10 MHz GNSS－Locked OCXO Reference with NMEA and PPS

The NR7000 picoPOD is a high－performance reference in an ultra－compact package that affords simple system integration．

The picoPOD is just $2 " x 2 " \times 0.9$＂and requires only a 5 Vdc source．Outputs are a 8 dBm sinewave or LVCMOS 10 MHz output，PPS at 3.3 Vdc ，and NMEA at LVCMOS or RS232 levels．The picoPOD can also lock to an external pulse or provide pulse timing．

A low phase noise OCXO at $-155 \mathrm{dBc} / \mathrm{Hz@1000Hz}$ provides a holdover stability of $\pm 100 \mathrm{ppb} /$ year．

## Low Power Consumption

Steady state power＜ 2 W ．With a single 5 V input，the picoPOD provides active antenna power at 3.5 V （ 35 mA ）．

## High Sensitivity GNSS Receiver

The 26 channel high－sensitivity，high－ accuracy multi－GNSS receiver supports TRAIM，GPS，GLONASS，QZSS，SBAS， active anti－jamming and advanced multipath mitigation functions．

## Auto Cal

The unit stores the temperature／time performance of the holdover crystal multiple times per day．If GPS is lost，the unit uses the last best－known compensation．
